VDOINTEL AT WORK IN STUDENT COMMUNITIES
Comact Crime, Improve Safety and Foster Development with VDOINTEL Analytics.

DELIVER SAFE, SECURE AND SUSTAINABLE COMMUNITIES

From local police forces to federal agencies, law enforcement worldwide relies on video surveillance to collect intelligence
and evidence crucial for protecting citizens and increasing security. Most cities and towns have video surveillance systems, but not all of them leverage those systems
effectively. By collecting and structuring video data, VDOintel's video content analytics (VCA) technology enables law enforcement agencies to efficiently visualize and analyse video content.

ACCELERATE INVESTIGATIONS

Processes video to make it searchable, actionable and quantifiable. By identifying
objects in video footage – such as vehicles, animals, and other items–
hours of video can be reviewed
in minutes, easily searched and quickly comprehended.

ATTAIN SITUATIONAL AWARENESS

Triggers real-time notifications when individuals of interest or suspicious activity is detected, based on face and license plate recognition and behaviours, such as loitering, entering restricted areas and more. This empowers officers to be more responsive and proactive as situations develop.

Increases situational awareness by triggering real-time count-based alerts based on customizable dynamic rules, such as when a specified number of objects or
a concurrent number of objects appear in a predefined
area within a certain time period.

VDOintel

TRANSFORMING CMMUNITIES BY OPTIMIZING BOTH SAFETY AND OPERATIONAL EFFICIENCIES

STUDENT COMMUNITIES

To track and deter crime, the XXX student communities uses the VDOintel service to detect and prevent crime. Thanks to video content analytics and traditional police detective work, it didn't take long for the LAPD to keep the community safe.

Our Real-Time Analysis allows analysts to quickly review footage from cameras at any of several locations around the property. Analysts can condense hours of footage into a couple of minutes and enable police to pinpoint objects of interest, filtering out irrelevant objects.

When we make a 911 call come, the VDOintel team assists dispatchers to coordinate the address on the map with the nearest cameras in the area to see if there is footage of potential suspects coming or going. If there's a description of a car fleeing the scene, they can quickly review footage from cameras nearby.

Working with information in real-time increases officer and civilian safety as officers respond to incidents. During a recent trespassing incident analysts were able to quickly view several perspectives of the crime scene via different cameras, and deliver timely, accurate and actionable information to the responding officers.
